EDUCATION

Guru Gobind Singh College of Engineering and Research Center

Nashik, Maharashtra

Bachelor of Engineering in Computer Engineering

Aug. 2022 – May 2025

EXPERIENCE

Naxert Infotech

September 2025 – Present

Nashik, Maharashtra

- Implemented Elasticsearch-based search to replace traditional SQL queries, improving search performance by 60–80% and significantly enhancing user experience.
- Reduced average query response time from 3–5 seconds to under 200 ms, resulting in faster page loads and a noticeably smoother user experience.
- Collaborated closely with cross-functional team members (backend, frontend, QA) to implement and ship the Elasticsearch-based search feature, accelerating feature delivery timelines by 30% while maintaining code quality and performance standards.

PROJECTS

Accident Severity Prediction Based on Road and Environmental Conditions | *Python, AI/ML*

- XGBoost baseline achieved 85% accuracy.
- Built the model using 7 key road and environmental features across 10,000+ accident records to classify severity levels.
- Performed data preprocessing on 100% of categorical features using encoding and applied scaling to all numerical features, improving model stability.
- Evaluated 5+ machine learning algorithms and selected XGBoost after achieving 8–12% higher accuracy than baseline models.
- Serialized the trained model and 10+ preprocessing encoders using Joblib, enabling <100 ms prediction time for future inference.

RFID Enabled Child Tracking System for Public Crowded Spaces | *Python, AI/ML, HTML, CSS, PHP, JS*

- Developed an RFID and GPS-based child safety tracking system capable of monitoring 10+ children in real time within public areas, improving child location visibility and response time.
- Built a real-time web portal with live location updates (every 3–5 seconds) and integrated face recognition to enhance identification accuracy and overall system security.
- Implemented end-to-end hardware–software integration using 1 Raspberry Pi controller, 10+ RFID tags/readers, and GPS modules, with a Firebase backend handling 100% real-time data sync, ensuring >95% tracking reliability during testing.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL

Frameworks & Technologies: React.js, Node.js, Express.js, Bootstrap, Material UI, RESTful APIs, Unlabeled UI

Databases: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: Microsoft Azure, Git, GitHub

Tools: VS Code, Visual Studio, PyCharm, Postman

Libraries: Pandas, NumPy, Matplotlib

CERTIFICATION

Data Science

Internship Completion Certificate

Industrial Training Completion Certificate
